

The surface mounted MCI™ Transport is designed to improve indoor air quality by dealing with pollutants in a proactive way. The MCI™ Transport sanitizer produces aggressive ionized oxidizers and trademarked multi-cluster ions that are then distributed throughout the mobile environment.

This trademarked MCI™ Multi-cluster Ionization Technology, using an enhanced output, represents the newest generation of pro-active air purification, is completely safe, unlike high levels of ozone, and effectively destroys mold, mildew, bacteria, viruses, odors, volatile organic compounds (VOCs) and the odors associated with them in the air and on surfaces.

When used as part of a holistic solutions protocol, the MCI™ Transport sanitizer provides a comfortable and germ-free environment in buses, RVs, ambulances and other mobile environments. This particular air purifier is designed to cover approximately 1,500 cubic feet depending on the level of contamination.

MAIN FEATURES

- **Ball bearing brushless quiet blower motor.**
